(54) DRUG OF BLENDED TWO COMPONENTS

(57)Abstract:

PURPOSE: To obtain a drug of blended two components showing more improved lowering action on serum cholesterol, improving effect on serum lipid and improving effect on arteriosclerosis compared with separative use of each component, having high safety, by blending pantethine with soysterol.

CONSTITUTION: A drug of blended two components obtained by blending pantethine with soysterol as active ingredients. Soysterol is an unsaponified substance of soybean oil, contains vegetable sterol and natural tocopherol in high concentration and various kinds of soysterols occur depending upon the contents of the components thereof. A soysterol prescribed by the drug component standard not included in Japanese Pharmacopoeia is generally preferable among the soysterols. The weight ratio of the active ingredients blended is usually 1:0.5W5.0, preferably about 1:2. Addition of vitamin E (e.g. α -tocopherols) is further expected to have improving effect on hyperlipemia and improving effect on arteriosclerosis.
